## January 2026

## INView© v12.1.x - New Features

INView is the industry's preferred web-based instrumentation browser for SPI/SI data, with a proven deployment footprint across more than 180 plant sites worldwide. Its widespread adoption is driven by WiseTools' purpose-built features and plant engineering-focused design, which improve data accessibility, reduce manual effort, and enhance the efficiency and reliability of instrumentation workflows.

**Scheduled for release in March 2026,** INView is fully PC and tablet-compatible. It does not require a SPI/SI license or the SPI/SI IDEAL service.

### DATASHEETS

**Redlines –** introducing AI-assisted datasheet redline creation for SPI/SI. The system extracts nameplate data directly from equipment name plate photographs and automatically generates a new datasheet redline populated with manufacturer name, tag number, model, and serial number. Once the redline is reviewed and approved, the data can be imported into SPI with a single action.

**Comparison Reports –** batch compare project datasheets with the As-Built datasheets. This report includes datasheets with no changes (ie. rev numbers are the same) and claimed datasheets.

### PANEL STRIP WIRING

**Comparison Reports –** batch compare claimed panel strip wiring changed in a project to the related As-Built panel/strip wiring.

### PHOTOS

- Automatically adds the related username to the uploaded photo.
- The photo icon in the Index Global Tag search results displays a red camera icon to indicate the tag has an associated photo(s).
- INView automatically adds a suffix to duplicate photo file names.

---

## BROWSER VIEWS

- Enhanced browser column header filtering available.

- **Spec Form Browsers –** options added to include:

  - ✓ SPI standard data fields:

    - • Tag Category,
    - • Area/Unit,
    - • Tag status,
    - • Loop Name,
    - • Location.

  - ✓ Index UDF and UDT related data fields.

## INSTRUMENT PROPERTIES

**New Hotlinks:**

- **Line number –** when INP&ID is configured, SPP&ID line data is displayed, otherwise it displays SPI line data.

- **Datasheet equipment number –** when INP&ID is configured, the line number hotlink opens the related P&ID drawing and zooms into the equipment. Clicking the P&ID equipment will display the equipment's SPP&ID metadata.

- **3D link button** added beside the Instrument Name in the Instrument Properties window. Opens the instrument in 3D UPV when app is configured.

## LOOP DRAWINGS

- Admin can now configure INView to display hotlinked non-wired loop instrument tags on the loop drawing.

- **Loop Check Folders:**

  - ✓ Enabled active hotlinks on Loop Check PDFs so they are available to the user on a tablet on the plant site.

  - ✓ All documents in a loop check folder can be printed to enable the users to perform a manual loop check on the plant site.

## INAPI

- Added more API calls for:

  - ✓ Archived datasheets and loop drawings.

  - ✓ SPI external docs such as Location plan, C&E diagram providing the link to the document management system is defined

## INVIEW ADMIN MODULE

**New Optional Functions in the Admin Module:**

- **Access**
    - ✓ **Usage Log** – use this option to view a usage log file which tracks application usage by user.

- **Redline**
    - ✓ DS with RDL Rev – use this option to view/export a report identifying datasheets with a redline revision.

- **AI (Optional)**
    - ✓ **AI Function** – use this option to define the AI's function
    - ✓ **AI Provider** – use this option to identify the AI provider ie. Azure AI.

- **Options**:
    - ✓ **Alarms and Trips** – use this option to add Alarm and Trip data from up to 3 custom UDF fields.

- **Project**
    - ✓ **Datasheet Compare** – use this option to create a report that batch compares Project datasheets with As-Built datasheets.
    - ✓ **Strip Compare** – use this option to create a report that batch compares claimed panel strip wiring changed in a project to the related As-Built panel/strip wiring

- **SPI Tools**
    - ✓ **Specification Forms** – use this option to view a report listing 1) <u>selected</u> **Spec Form Names** or 2) <u>all</u> **Spec Form Names**.

      The user can unzip the downloaded zip file containing selected the datasheet spec page PSR files to view and/or print the files or download them one at a time from the report.

## INView© System Requirements

- SPI/SI v2016, 2018, v13, v14
- Microsoft Server v2016, 2019, 2022 using .NET 4.8 or greater
- Oracle v12 – v19 or Microsoft SQL 2014 – 2019
